

WHY GUESS? TEST

Vaginal Yeast Infection

Vaginitis is among the most common conditions for which women seek medical care.

Common infectious forms of vaginitis include Trichomoniasis, Bacterial Vaginosis (BV) and Vaginal Yeast Infection

- About 75% of women will have a Vaginal Yeast Infection during their life time
- 35% of all adult woman will have a recurrent Yeast Infection

Symptoms

- Itching
- Vaginal discharge
- Soreness
- Rash
- Genital burning that may increase during urination

Why Test for Vaginal Yeast Infection?

The symptoms of Yeast Infection are non-specific and can be very similar to those of other vaginal infections therefore self - diagnosis based on clinical symptoms is incorrect in more than 50% of cases.

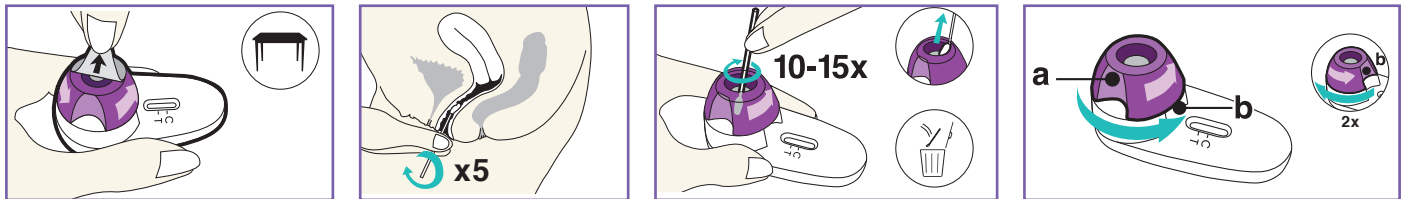

Since the treatment of Yeast infection is different from that of Trichomonas and BV, it is important to have a reliable diagnosis and thereby receive the correct treatment.

Avoids misuse of medication.

Yeast Infection is the only vaginal infection for which OTC treatments are available, allowing women to self-diagnose and self-treat their condition.

Savvycheck™ Vaginal Yeast Test

Savvycheck™ Vaginal Yeast Test is a diagnostic kit for rapid detection of vaginal candida infection, intended for self-testing at home

Easy to use

One step novel device designed for non-professional users
